Yabetse Tesfaye

Backend Software Engineer

yabtesfu@gmail.com | +251966331110 | Addis Ababa, Ethiopia | LinkedIn | Portfolio | GitHub

SUMMARY

Backend Software Engineer with 6+ years of experience building backend services and APIs in Python, FastAPI, and PostgreSQL, with a focus on application security and maintainable architecture. Helped lead six backend engineers through a migration from Flask and MongoDB to FastAPI and PostgreSQL.

TECHNICAL SKILLS

Languages: Python, Go, JavaScript, SQL, Java, C++, Bash, Rust
Frameworks and Databases: FastAPI, Gin, SQLAlchemy, asyncpg, PostgreSQL, MongoDB, Redis, Flutter, FlutterFlow
Cloud and DevOps: GCP, Docker, Kubernetes, Terraform, AWS CDK, Git, GitHub Actions, Jenkins, CI/CD
Testing and APIs: Pytest, Test Driven Development, REST APIs, Debugging

PROFESSIONAL EXPERIENCE

Revelo, AI Infrastructure and DevOps Training Engineer — Feb, 2026 to Oct, 2026

- Built and evaluated Infrastructure as Code scenarios in Terraform, AWS CDK, Python, YAML, and JSON for AI training.
- Reviewed AI generated infrastructure for correctness and feasibility, documenting errors to improve model quality.

Turing, LLM Trainer and AI Data Annotator — Apr, 2025 to Feb, 2026

- Produced detailed video annotations for multimodal AI training, capturing actions, context, and temporal relationships.
- Evaluated AI generated responses through targeted prompts, expected output comparisons, and response validation.

Upwork, FlutterFlow Mobile Application Developer — Dec, 2024 to Apr, 2025

- Developed cross platform mobile apps with FlutterFlow and Flutter, translating client requirements into working features.
- Integrated REST APIs and backend services with asynchronous data handling, validation, and state management.

AfroChat, Backend Engineer and Project Co Lead — Jan, 2023 to Dec, 2024

- Helped lead six engineers migrating from Flask and MongoDB to FastAPI and PostgreSQL with async SQLAlchemy.
- Refactored services with Domain Driven Design and Test Driven Development, improving modularity and automated testing.
- Built GitHub Actions workflows and Python tooling for testing, Docker image builds, and deployment.

Eskalate, Full Stack Engineer — Jan, 2021 to Jan, 2023

- Designed authentication and authorization with reusable application security components.
- Built secure backend APIs with input validation, access controls, rate limiting, and audit logging.
- Built and deployed an AI powered assistant that automated FAQs and selected support workflows.

Eskalate, Junior Full Stack Engineer, Addis Ababa — Nov, 2019 to Jan, 2021

- Developed web application features spanning user interfaces, authentication, authorization, and backend logic.
- Contributed to a team project that placed third in a technology competition.

PROJECTS

ImmuStore DB: Pure Python database engine with a copy on write B+ tree, MVCC, and Raft replication.

Nodechain Lab: Real time Node.js blockchain with proof of work, signed transactions, and WebSocket gossip.

RustV OS Lab: Bare metal RISC V kernel in Rust with preemptive scheduling, Sv39 paging, and a virtio block driver.

Litestar, Open source contribution: Co authored a merged OpenTelemetry tracing fix covering all middleware. Aug, 2024

EDUCATION

American College of Technology (ACT), Bachelor of Software Engineering, GPA 3.82 — Oct, 2018 to Jul, 2022

A2SV, Africa to Silicon Valley, Software Engineering Program, Data Structures and Algorithms — Jan, 2022 to Mar, 2023

AWARDS

1st Place, Ethiopian Competitive Programming Contest, ALX — Jan, 2024

1st Place, A2SV Project Competition, Atrons. $8,000 team prize — Sep, 2022

Hackathon Winner, Alpha 1S Robot Bluetooth Control. Reverse engineered Bluetooth protocols to enable direct robot motor control. — Apr, 2021

Winner, UNDP and Ministry of Innovation and Technology COVID 19 Innovation Challenge — 2020

VOLUNTEERING

Robotics Instructor, Eagle Robotics. Mentored 30 students in Python and Raspberry Pi robotics. — 2021
