Yabetse Tesfaye

Backend & Full-Stack Software Engineer

yabtesfu@gmail.com +251966331110 Addis Ababa, Ethiopia LinkedIn Portfolio GitHub

SUMMARY

Backend and Full Stack Software Engineer with 6+ years of experience modernizing backend services, building internal platforms, and automating software delivery. Coordinated a team of six backend engineers and contributed to systems supporting 200+ employees across four time zones.

TECHNICAL SKILLS

Programming Languages: Python, Go, JavaScript, SQL, Java, C++, Bash
Frameworks & Databases: FastAPI, Gin, SQLAlchemy, PostgreSQL, MongoDB, Redis, Flutter, FlutterFlow
Cloud & DevOps: GCP, Docker, Kubernetes, Git, GitHub Actions, Jenkins, CI/CD
Testing and APIs: Pytest, Test Driven Development (TDD), REST API Development, Debugging

PROFESSIONAL EXPERIENCE

Revelo, LLM Trainer, AI Data Annotation and Model Evaluation — Feb, 2026 to Oct, 2026
- Annotated video frames for multimodal AI training, recording actions, context, and event sequences.
- Evaluated LLM outputs with targeted prompts and response checks, documenting inconsistencies for model review.

Turing, LLM Trainer and AI Data Annotator — Apr, 2025 to Feb, 2026
- Curated multimodal training data, validating annotation consistency, accuracy, and temporal alignment.
- Reviewed AI generated responses and reported quality gaps to inform model evaluation.

Upwork, FlutterFlow Mobile Application Developer — Dec, 2024 to Apr, 2025
- Delivered responsive FlutterFlow and Flutter applications, translating client requirements into reusable interfaces and workflows.
- Integrated REST APIs, state management, and data validation while resolving implementation issues with remote clients.

AfroChat, Eskalate, Backend Engineer and Project Co Lead — Jan, 2023 to Dec, 2024
- Helped lead six backend engineers in migrating AfroChat from Flask and MongoDB to FastAPI and PostgreSQL, introducing asynchronous data access with SQLAlchemy and asyncpg.
- Refactored services using Domain Driven Design and Test Driven Development to strengthen modularity and automated testing.
- Created GitHub Actions pipelines and Python tooling for test execution, Docker builds, and container deployment, removing redundant build operations.

Eskalate, Full Stack Developer, Internal Tooling — Jan, 2021 to Jan, 2023
- Built Slack and Google Sheets automation supporting internal workflows for 200+ employees across four time zones.
- Implemented queued notifications for delivery across time zones and web tools for project reporting and employee evaluations.
- Configured Go microservices and Kubernetes infrastructure for container orchestration, deployment, and monitoring.

Eskalate, Junior Full Stack Engineer — Nov, 2019 to Jan, 2021
- Implemented authentication, authorization, and user facing application features based on business requirements.
- Collaborated on a software project that earned third place in a technology competition.

PROJECTS

ImmuStore DB, Python Database Engine
- Built a learning focused database engine with copy on write B+ trees, MVCC, crash recovery, and Raft replication.
- Added an asynchronous Redis compatible server and deterministic fault injection tests.

Litestar, Open-Source Contribution — Jul, 2024
- Contributed to OpenTelemetry tracing and exception capture within a Python ASGI framework.

pgxmock, Open-Source Contribution — Apr, 2024
- Extended batch query mocking for Go and PostgreSQL testing with pgx interfaces.

GAN Observatory, Real-Time ML Monitoring Platform
- Created a FastAPI and WebSockets dashboard streaming GAN training metrics at approximately 20 FPS, with hyperparameter controls and mode collapse detection.

EDUCATION

Bachelor of Software Engineering — Sep, 2018 to Jun, 2022
American College of Technology | ACT
- CGPA: 3.82

Software Engineering Program — Jan, 2022 to Mar, 2023
A2SV | Africa to Silicon Valley
- Data Structures and Algorithms

VOLUNTEERING

Robotics Instructor, Eagle Robotics — 2021
- Mentored 30 students in Python and Raspberry Pi robotics.

AWARDS

1st Place, Ethiopian Competitive Programming Contest, ALX — Jan, 2024

1st Place, A2SV Project Competition, Atrons — Sep, 2022
- $8,000 team prize

Winner, UNDP and Ministry of Innovation and Technology COVID 19 Innovation Challenge — 2020

Hackathon Winner, Alpha 1S Robot Bluetooth Control — Apr, 2021
- Reverse engineered Bluetooth protocols to enable direct robot motor control.
